Abhinav is cleverest boy in our class. Mohan sits besides me. I work hardly to get the first rank in my class. I am senior than Krishna. The teacher like me a lot. She don't scold me.

16. Read the following passage and frame two Yes/No questions and three Wh-questions :

The coast line of Andhra Pradesh is nearly 1000 kms. Our State has the longest coast line after Gujarat. There is a natural harbor at Vishakhapatnam. Salt is made from sea waters at Srikakulam, Vishakhapatnam, Kakinada and Uppada. Many coastal villages depend upon marine fishing.

Godavari, Krishna and Penna are the important rivers in the State. About 15 percent of the river waters of India flow through the State. There are many tanks and the lakes. Pulicat Lake contains salt waters. It extends over an area of 250 square km. the average rainfall is 926 mm. in the Rayalaseema region it was only 780 mm. coastal Andhra and Telengana recorded 941 and 961 mm.

17. Write a paragraph using the following hints :

Independence day—15th August 1947—sacrifice by patriots—First war of independence—non cooperation movement—Civil disobedience movement—Quit India movement—Attainment of independence—maintain freedom—development of country—population problem—transformation into a developed nation.

18. Read the following passage and answer the questions that follow :

A star is the ball of very hot gas which shines by its own light. Planets, as you know, and our moon, too, shine only by light reflected from the sun and planets shine with a steady light while stars appear to twinkle. This is caused by substances in the air between the star and the earth. The unsteady air bends the light from the star, and then it seems to twinkle.

Why does our sun shine? Because it is a star and not a very big or bright star at that. Compare to all the other stars in the sky, it

might be considered medium-sized and medium-bright. There are millions of stars that are smaller than our sun and many stars are several hundred times larger than the sun. They look small only because they are so far away. Ever since the days of the Greek astronomers, some 2000 years ago, the stars have been divided into classes according to their 'magnitude', or brightness. Another way of grouping stars is according to their spectra or the kind of light that comes from the stars.

- (a) Who do stars twinkle?
- (b) Why do stars look small?
- (c) How are stars classified?
- (d) How can you describe the sun?
- (e) Give synonymes of the following words :
 - (i) Twinkle
 - (ii) Several
